

1 Decay Scheme

Am-241 decays 100% by alpha transitions to Np-237. Most of the decay (84.6 %) populate the excited level of Np-237 with energy of 59.54 keV. Branching of Am-241 decay by spontaneous fission is 3,6 (9) E-10 %.

L'américium 241 se désintègre à 100 % par émission alpha vers le neptunium 237. Le branchement principal (84,6 %) se fait vers le niveau excité de 59 keV. Un faible branchement (3,6 (9) E-10 %) par fission spontanée a été observé.
